Rich with history, staffed with highly-qualified, expert employees, including Magnet award-winning nurses, looking into an exciting future of medical advancements and facility changes, St. Joseph's Healthcare System is the health care provider of choice for residents of Northern New Jersey.

Throughout our facilities, we provide a broad spectrum of cutting-edge care with high excellence as seen by recently achieving over 95% of national core measures for quality, receiving many American Heart Association awards, and having over 99% coronary artery bypass grafting success rates, while also adding new pediatric and adult sub-specialties to meet the needs of our patients.

Alliances with other institutions, like St. Jude Children's Research Hospital, along with our advances in telemedicine capabilities, helps St. Joseph's Healthcare System's physicians and staff share our successes and knowledge around the world. Even locally we are being noticed, having recently received Press-Ganey patient satisfaction awards. We take pride in knowing that those who have come here for their care recognize and promote the excellence of our staff.

Watching the evolution of St. Joseph's is an exciting story that will continue into the next chapter with a \$250 million expansion project. This project will modernize St. Joseph's Healthcare System's facilities for our nearly 1,000 Board certified medical staff. As we make medical and facility advancements, we will continue to maintain our Mission and Vision, along with our Values of Dignity, Justice, Stewardship and Excellence, as we have for over 140 years.
